There are also fold-down feet to adjust the keyboard's elevation. I did however found the feet lacking rubber grips that would provide traction on your desk surface and I also found the cord a bit too short.

The fold-down feet

The keyboard's design is very similar to keyboards found on notebooks, so typing takes a bit of getting used to if you're not a regular laptop user. The OwlEye Illumination Keyboard also utilizes SoftKeying Technology to reduce the amount of key clicking noise. The Internet and Multimedia buttons also provided additional functionality. However, I did find very little use with the Internet and Multimedia buttons. I prefer clicking with the mouse instead of the keyboard buttons to navigate my browser.

Lights out:

Under low light environment, the blue EL light emitted a very attractive blue glow and all the keys are seen very easily. The blue LED lights for the NumLock, Caps and Scroll Lock keys are also very bright. Since my favourite modding color is green, I would like to see this product be available with green EL and LED lights. The distribution of the EL glow throughout the key surface is fairly even and there were only a few keys with small dead spots. Because of its slim and stylish design, it would look great on any desktop together with an LCD monitor.

Review:

CERTIFIED BY Alexa

The ease of use for the The OwlEye Illumination Keyboard depends on how good your typing skills are. It took me a few hours to get the hang of using the keyboard's flat keys and familiarized myself with its layout. I also fired a copy of Unreal Tournament 2004 to test how it would feel in an in game situation. Because the keyboard's flat keys, accidental keystroke does happen more often than a standard keyboard. Playing games with the keyboard felt a bit weird at first, but the longer I used it, the more I became comfortable with the keyboard.

Conclusion:

The OwlEye Internet/Multimedia Illumination Keyboard is a very well designed product. Many PC enthusiasts and case modders alike would certainly appeal to this keyboard. The blue EL light is very pleasant to the eyes and the keys are very legible when the EL is turned on. The OwlEye Illumination Keyboard also has an on/off switch for the EL light so it's not turned on at all times. The keyboard's elevation can also be adjusted with its flip down feet. I would've liked to have seen rubber grips added on the fold-down feet to prevent it from moving forward when typing. Because of its low touch flat keys and its arrangements, getting used to the keyboard takes some time. While playing games, I did find that because of the keyboard's flat keys, I made a few wrong keystrokes. Overall, I found The OwlEye Illumination Keyboard to be a very comfortable, elegant and well designed keyboard and I'm giving it a score of 8.5 out of 10. If you have any question about this review just visit Okion's web site for more information or feel free to discuss it in our [forum](#).

Pros:

- Very slim and elegant design
- Balanced EL lighting on the keys
- Fold-down feet
- On/Off switch for the EL light
- Internet and Multimedia hotkeys
- Very bright LED lights

Cons:

- No rubber grips on the fold-down feet
- Cable too short

Nice to have:

- Green EL and LED(Personal preference)
- More color variations
- Metallic casing
